Native recombination: matter transfer and power vs CAMB 1.6.5
$N_{\rm eff} = 0$
$N_{\rm eff} = 3.046$
z = 49, default
z = 0, default
z = 49, refined
z = 0, refined
δ_{cb} difference [%]
P_{cb} difference [%]
k [Mpc^{-1}]
Difference = 100 (native/CAMB − 1). Matched primordial amplitude; no fit.
Boltzmann default: $L = 64$, rtol 10^{-6}; refined: $L = 128$, rtol 10^{-7}. Native recombination fixed at its default settings.
